Model unit test line coverage

Measured using Python 3.13.0 and the standard-library trace module.

Reproduce from the project root with `python3 tools/measure_coverage.py`.

Test result: 32 tests executed; 0 failures; 0 errors.

Model source	Executed lines	Executable lines	Line coverage
model/__init__.py	6	6	100.00%
model/criteria.py	121	121	100.00%
model/errors.py	11	11	100.00%
model/manager.py	60	60	100.00%
model/records.py	96	96	100.00%
model/storage.py	43	43	100.00%
Total	**337**	**337**	**100.00%**

Scope: every Python module in model; controller and CLI tests also run, but their lines are excluded.

Method: trace measures executed source lines, including import-time class/function definitions. It is line coverage, not branch or path coverage. Percentages use executed / executable lines reported by trace, without excluding error paths or model code.

Annotated per-line details are regenerated in .coverage/; >>>>>> means not executed.
